

LIFE CLONING GEL VS INDUSTRY LEADER

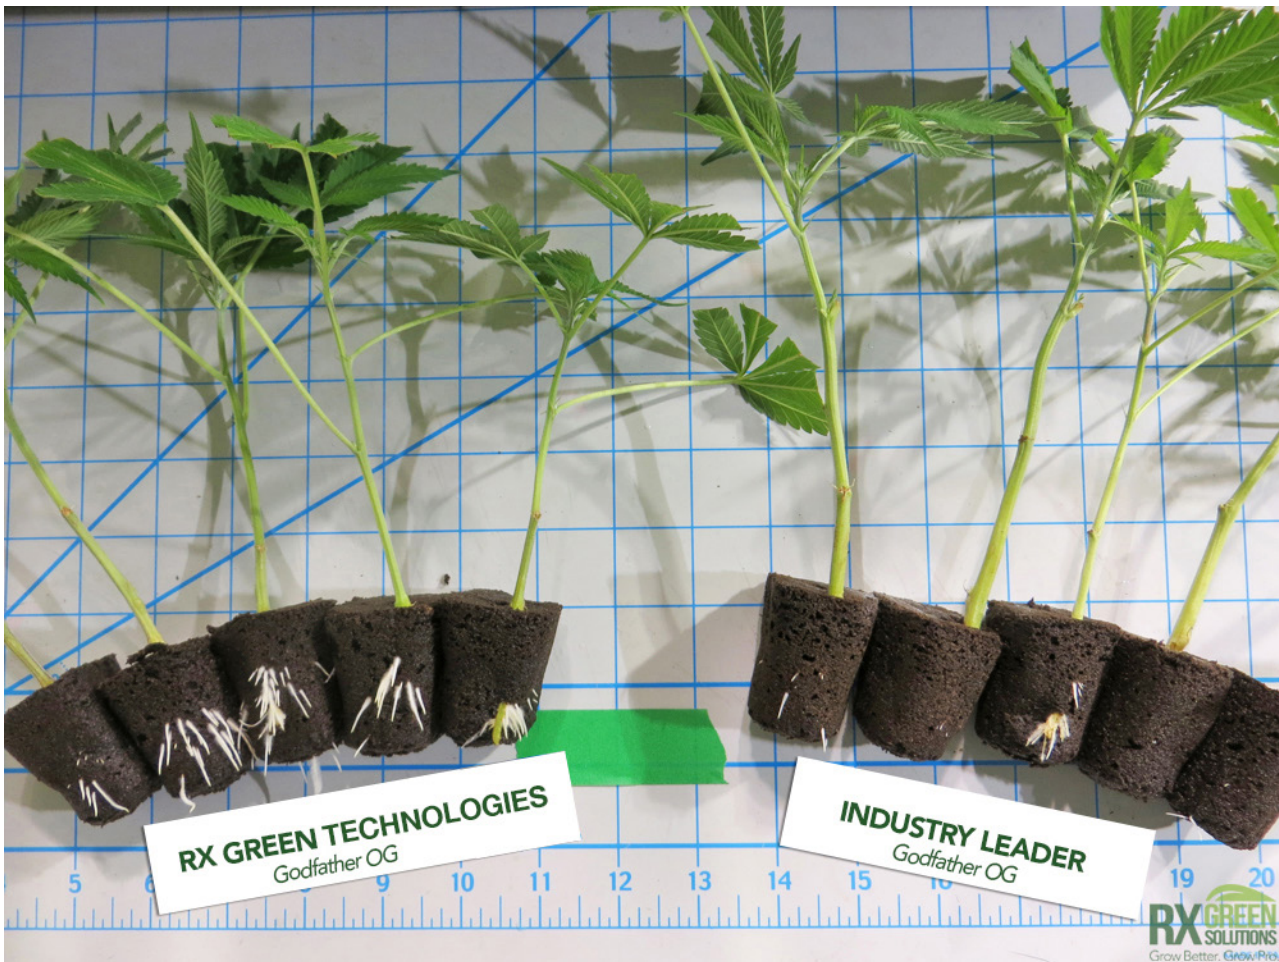

SUMMARY

After over 12 months of research and development, we finally found the ultimate formula for our LIFE Gel product. We are pretty excited about the results from this Liquid Gold formula. To make it easy, there is no need to change your cloning process....cut, dip and place into a plug or aeroponic machine. Water every few days and the results will be impressive.

What is so interesting about LIFE Gel? Similar to other cloning gels, LIFE Gel contains IBA and B1 Vitamin to promote root development. What is unlike other cloning gels is LIFE Gel contains a naturally occurring biocide, Thyme Oil, which replaces the standard ingredient 1,2-benzisothiazol-3(2H)-one, which is known health and environmental concerns and require EPA regulation. Not only does the product contain natural ingredients, LIFE Gel just plain works better than the competition.
