

PREMIUM DRY FERTILIZERS FOR CANNABIS

Rx Green Technologies' full lineup of dry fertilizers are exclusively formulated to meet the unique needs of cannabis plants at every stage of growth. Our Part A, Part B, and PK products deliver a precise balance of nutrients essential for vigorous root development, robust nourishment, as well as optimal resin and flower production.

Our fertilizers are made with the highest quality ingredients and allow your team to achieve healthier plants, maximizing your garden's potential. Using our top-of-the-line solutions, you can ensure compatibility and consistency throughout the vegetative and flowering stages of your grow operation.

With Rx Green Technologies, you get the confidence of products that are tested in-house and trusted by commercial cultivators, ensuring your crops receive consistent, research-driven nutrition for unmatched performance.

**BACKED BY YEARS OF
RESEARCH AND DEVELOPMENT**

PROVEN RESULTS

**HELPS OPTIMIZE
HIGHER YIELDS**

WHAT MAKES OUR DRY FERTILIZERS DIFFERENT:

- Engineered for the specific needs of cannabis plants.
- Our system supports all stages, providing consistent and high quality results.
- The premium ingredients used exceed common industry standards, providing clean and safe cultivation.
- Backed by years of testing from trusted growers.
- Designed to optimize plant health while maximizing yields and terpene production.
- Our products are designed and tested exclusively for cannabis, ensuring optimal results tailored to the unique needs of commercial cultivators.

OUR DRY FERTILIZERS

Optimize cannabis growth, quality, and yields with our proprietary dry fertilizers, delivering essential nutrients for every stage.

PART A FERTILIZER FOR CANNABIS VEGETATION & FLOWERING

Part A (4-16-21) delivers key nutrients through its blend of phosphorus, potassium, and magnesium, supporting protein synthesis, enzyme function, plus metabolite production at all stages of growth. This combination of micronutrients offers you the flexibility to reduce or increase amounts as you see fit depending on what your plants need. Part A pairs with Part B for superior results.

PART B FERTILIZER FOR CANNABIS VEGETATION

Part B (14-0-6) delivers nitrogen, potassium, calcium, and magnesium, working seamlessly with Part A for superior vegetative and flower development. Part B helps your plant reach full growth potential by providing the key components needed for structure and energy production.

PK FERTILIZER FOR CANNABIS FLOWERING

PK (1-44-35) delivers essential phosphorus and potassium to meet the high energy demands during flowering. PK is highly concentrated and highly soluble, allowing you to add as much phosphorus and potassium to your plants as needed, utilizing minimal filler. Use with Part A and Part B for optimal resin and flower production during the flowering phase.
